

## **MAKE A SOUND INVESTMENT IN THE FUTURE OF YOUR RESIDENTS**

**Make a sound investment in the future for your residents and invest wise money in self rehabilitation products for all of your residents. It's your responsibility to improve their care and not allow them to decline in physical status.**

**A facility must care for its residents in a manner and in an environment that promotes maintenance or enhancement of each resident's quality of life. Each resident deserves to receive and the facility must provide the necessary care and services to attain or maintain the highest practicable physical, mental and psychosocial well-being in accordance with the comprehensive assessment and plan of care.**

**Whether the resident's ability to transfer and ambulate has declined, improved or stayed the same and whether any deterioration or decline in function was avoidable or unavoidable.**

**The Merry Walker Corporation creates and develops products to meet the needs of your residents. Many other companies over the years have fabricated copycats made from PVC. There are many negatives in using PVC to build walker/chair combinations and they are as follows:**

- they tip easily
- they are highly breakable
- the seats are unable to be cleaned
- they are cheap and flimsy
- they are toxic should they burn
- they are not bottom weighted
- they cannot not fold
- they are not designed to meet the end user's needs
- they are not sized to end user's measurements

**Merry Walkers were designed by a medical professional who listened to the medical professionals in the field and made the necessary changes which makes the Merry Walker Corporation product line what it is today. The positive aspects of Merry Walker product line are as follows:**

- made from tubular steel, will not break
- walking space meets residents needs
- folds for storage and transport
- fully washable
- will not burn
- is tip resistant due to being bottom weighted
- totally designed to meet the user's needs in walking assistance
- sized to meet the user's needs, three widths and five height sizes
- Merry Walker are not copycats...they are the originals, with modified design
- created by a medical professional

**Merry Walkers offer:**

- **less work for staff as it takes only one person to ambulate a resident, not two----- keeps staff working without injuries**
- **keeps residents up and walking and mobile, decreasing the likelihood of unnecessary decline in physical status**
- **provides for self-rehabilitation—meets needs of restorative nursing staff**
- **cost effective as resident's health status does not decline**
- **family members like to see resident walking**
- **resident likes and needs to walk- we are made to walk upright**
